

Goorambat Wagyu

Pedigree backed by performance

Offering multi award winning Australian Wagyu genetic solutions for:

* Carcass consistency – marbling & flavour * Genetic diversity

GOORAMBAT MR. MARBLE K483

“GRSFK0483 is showing his **PROVEN PERFORMANCE** as a sire to transmit growth, milk and marbling in his progeny. His daughters are lovely big heifers and the steer progeny to date has been exciting in their ability to marble and produce carcass weight. Look at the average age at slaughter (AAS) of only 868 days or 28 ½ months. These are outstanding **actual** data figures and we look forward to seeing his EBVs rise even further when the data gets added to them”.

“In a leading Wagyu feedlot, based on over 200 bulls, GRSFK0483 has ranked as the **No 1** performance sire for CWT ”

Semen is available domestically in Australia for \$500 per straw and a very limited number of sexed export qualified male and female semen is available upon request.
